72 LEAVENING HOURS ONLY NATURAL YEAST

...THE LENGTH OF OUR PRODUCTION PROCESS, NECESSARY FOR THE CREATION OF SWEET EMOTIONS

It starts naturally from the raw materials and the sourdough, which is the most important ingredient in our world. The particular care that the sourdough needs requires alternating the flour and water mixing phases with further leavening phases, all of which must be performed while controlling both the temperature and the base-acid behavior resulting from fermentation.

Next come the actual mixing phases, 4 different ones all alternating with rest phases, performed in kneading machines with dipping arms. The dough, after being suitably divided into the right weight, is placed inside molds and baking cups and allowed to rise: one of the most important moments, only time contributes to the best result. The heat of the tunnel ovens operating according to balanced cooking schematics always yields the best result. Proper cooling is performed by special machines that turn the baked goods upside down for at least 4 hours. The stuffing, covering, granulation, and glazing phases take place either before or after baking, only the attentive eyes of the operators know just how much of each single ingredient is needed and that these must be expertly dosed and worked into the product. The elegance of the materials used and the expert hands of our packaging machines still make all of our products unique in order to give everyone the opportunity to choose their own dessert and satisfy every possible desire and taste.
